

Internship Report

A Report submitted as part of the academic requirement for the conferment of the degree

BACHELOR OF TECHNOLOGY (B-Tech)

in

Computer Science and Engineering

Presented by

Pulkit Krishna

Registration No.: [23105139024]

Internship Period: 3rd June to 2nd July

Guided by:

Mr. MD Danish Shakil (*Industry Mentor*)

Mr. Aamir Junaid Ahmed (*Founder, Software Services and Solution*)

Department of Computer Science and Engineering

RP Sharma Institute of Technology, Patna

Affiliated To : Bihar Engineering University

Submission Date

Acknowledgement

I would like to extend my sincere gratitude to Software Services and Solution for providing me with the opportunity to undertake this internship and gain practical exposure in the field of web development. It has been a valuable experience that has contributed significantly to my academic and professional growth.

I am especially thankful to my mentor, Mr. Md. Danish Shakil, for his continuous guidance, support, and constructive feedback throughout the duration of the internship. His mentorship played a crucial role in enhancing my technical skills and understanding of industry practices.

I also express my deep appreciation to Mr. Aamir Junaid Ahmed, Founder of Software Services and Solution, for facilitating a professional and supportive environment for learning and development.

Furthermore, I would like to acknowledge the role of RP Sharma Institute of Technology, Patna, affiliated with Bihar Engineering University, and the Department of Computer Science and Engineering for incorporating industry training as part of the academic curriculum.

Internship Certificate

  Certificate No: SSS/25/252

CERTIFICATE OF INTERNSHIP

This certificate is awarded to
Pulkit Krishna
a student of R.P. Sharma Institute Of Technology, Patna
for successfully completing 4 Weeks Internship (Web Design)
from 03/ June / 2025 to 02 / July / 2025

We wish all success in future endeavours.

26 / 06 / 2025

Introduction to the Internship

As part of the curriculum of the Bachelor of Technology (B.Tech) program in Computer Science and Engineering at RP Sharma Institute of Technology, Patna, affiliated with Bihar Engineering University, students are required to undergo industrial training to bridge the gap between academic learning and professional application.

I had the opportunity to undertake a one-month internship at Software Services and Solution, a company dedicated to providing software development and digital solutions. This internship aimed to provide hands-on experience in real-world web development projects, focusing on both front-end and back-end components.

The internship enabled me to enhance my technical knowledge and practical skills in technologies such as HTML, CSS, JavaScript, PHP, and MySQL, while also understanding how modern web applications are structured and managed in a professional setting.

Through this internship, I was able to work on a task management dashboard, gaining insights into real-time project handling, user interface design, database connectivity, and the importance of efficient backend logic. Additionally, the experience helped me understand the dynamics of working in a collaborative environment and the expectations of the software industry.

Company Profile

Software Services and Solution, established in 2001, is a reputable software development company committed to delivering high-quality and reliable IT solutions. With over two decades of experience, the company has built a strong foundation in designing and implementing customized software for a wide range of industries.

Founded by Mr. Aamir Junaid Ahmed, the company is headquartered in Bihar and is known for its consistent focus on innovation, client satisfaction, and technical excellence. Over the years, it has developed several digital solutions and government-supportive platforms, including projects tailored specifically for institutions and initiatives in Bihar.

The core services offered by the company include:

- Custom web and mobile application development
- Database management systems
- IT consulting and support services
- Enterprise software solutions

Software Services and Solution has earned a reputation for its practical approach to problem-solving, a strong work ethic, and delivering results that meet industry standards. Its client base includes businesses, educational institutions, and administrative organizations, reflecting a deep commitment to regional and national development.

Tools and Technologies Used

During the course of my internship at Software Services and Solution, I had the opportunity to work with a range of modern development tools and technologies. These tools played a vital role in designing, developing, and managing a fully functional task management dashboard with separate user and admin interfaces.

The technologies used are as follows:

➤ Frontend technology

HTML	CSS	JS	Boot-Strap
------	-----	----	------------

➤ Backend technology

PHP	My-SQL
-----	--------

➤ Development Environment

XAMPP	VS-CODE
-------	---------

➤ Additional Tools

PHP my admin

These tools collectively enabled the complete development of the internship project — from database design to frontend user interface, backend processing, and final deployment on a local server.

Project Work

During my internship at Software Services and Solution, I worked on the development of a web-based application that included two integrated systems: a Task Management Dashboard and a Personal To-Do List.

These modules were designed to streamline task assignment, user management, and individual productivity tracking. The system was structured to offer separate interfaces and features for Admin and User roles, along with a personalized to-do functionality accessible by individual users.

Key Features Developed:

Admin Panel:

- Assign tasks to users with title, description, and deadline.
- View all registered users and their task status.
- Manage users (create, update, delete).
- Change password and update profile.

User Panel:

- View tasks assigned by admin.
- Update task status (Pending/Completed).
- Access personal profile and password update.

Personal To-Do List:

- Users can add daily tasks or personal notes.
- Mark items as completed or delete them.
- Task data stored separately in a dedicated to do list table.

This complete system helped in building both organizational-level and individual-level task tracking mechanisms within the same environment.

My Responsibilities

- Designed all frontend interfaces using HTML, CSS, and Bootstrap.
- Implemented form validation and logic using JavaScript and PHP.
- Created structured MySQL tables: users, tasks, todo_list.
- Developed all backend features in PHP including task CRUD, login sessions, and status management.
- Managed secure authentication, session handling, and user role separation.
- Worked independently and under the guidance of my mentor to complete both modules efficiently.

Weekly Work Summary

The table below summarizes the weekly progress and activities carried out during my one-month internship at Software Services and Solution from June 1st to June 30th, 2025.

Weeks	Dates	Work Description
Week 1	June (1-7)	➤ Internship onboarding, system orientation, development environment setup (XAMPP, VS Code, phpMyAdmin), discussion on dashboard modules.
Week 2	June (8-14)	➤ Frontend design of Admin and User dashboards using HTML, CSS, and Bootstrap. Started writing PHP backend for login and task assignment.
Week 3	June (15-21)	➤ Integrated MySQL database, completed CRUD operations, user sessions, and admin panel logic
Week 4	June (22-30)	➤ Developed To-Do List as a separate module, performed testing, debugging, and began preparing the final report.
Week 5	1 July-3 July	➤ Got the Certificate

Architecture Design

Both Project followed a standard 3-tier architecture:

- Front-End (UI): HTML, CSS, Boot - Strap
- Backend (Logic): PHP
- Database Layer: My SQL

- Login Page:

- Register Page:

- Admin Dashboard

- User Dashboard

Databases

Database name: auth_new

Table name: Given

Challenged Faced & Solution

1. PHP-MySQL Database Load Time

Challenge: While working on the backend of the dashboard using PHP and MySQL, I experienced slow loading times, especially during login and data fetching. Sometimes, errors such as “MySQL server has gone away” or “Connection refused” appeared.

Solution:

- Verified and restarted the MySQL service via XAMPP.
- Used `mysqli_close($conn);` to properly close database connections.

2. Redesign Based on Mentor's Feedback

Challenge: After developing the initial UI for the Admin and User Dashboards, my mentor suggested improving the design with a more modern and clean layout. The original version lacked visual hierarchy and responsiveness on all screen sizes.

Solution:

- Applied consistent color schemes and shadow effects.
 - Added hover animations, button styling, and improved spacing.
 - Used icons and improved typography to make the UI intuitive.
- This redesign process helped me understand UI/UX best practices, how to implement feedback, and create interfaces that are both functional and visually appealing.

Conclusion

The one-month internship at Software Services and Solution proved to be an enriching and transformative experience. It provided me with the opportunity to apply the theoretical knowledge gained during my academic studies to real-world projects and challenges.

Working on the Task Management Dashboard and the To-Do List applications helped me understand the complete development cycle — from planning and UI design to backend integration and deployment. The hands-on experience with technologies like PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap has strengthened my technical foundation.

This internship not only improved my coding and database management skills but also enhanced my ability to:

- Analyze problems logically.
- Implement efficient solutions.
- Communicate and receive constructive feedback.
- Manage time while working on multiple modules.

Guidance from my mentor, Mr. Md Danish Shakil, played a crucial role in shaping my approach to software development and professional work ethics. Overall, this internship has significantly contributed to my growth as a budding developer and has prepared me for future professional opportunities in the field of software and web development.
